- Manage and create objects
- Manage work orders
- Overview all work orders
- Add time and material

Manage objects

With Idus Web, it becomes even easier to request work, plan work and receive and report work orders directly in the browser. You can limit part of your plant structure to certain users.

Risk assessments

Do your risk assessments directly on the work order and follow up on the adherence.

Lulekraft makes risk assessments directly on the work order

- We have been working with risk assessments for a long time, but now we can also see the risk assessments directly on the work order in Idus.

-Performing the risk analysis in Idus goes very quickly when it is located directly on the work order. It's a clear advantage to have everything in the same place, we also avoid using several applications.

- We definitely save time doing the risk analysis this way and it has become a simpler way of working. We can also follow up on the degree of execution, that is a good step forward.

Kristoffer Lantto CMMS coordinator, Lulekraft
